How Vamousse works

Dimeticone-based products cover the lice with a silicon-based product that prevents them from excreting water, killing them through osmotic stress.¹

However the unique Vamousse Head Lice Treatment formula contains the key ingredients isopropyl alcohol, isopropyl myristate and geraniol. This dissolves the lice's protective exoskeleton, meaning lice and eggs die quickly by dehydration.²

¹ The mode of action of Dimeticone, I. Burgess, BMC Pharmacology, 2009, 9:3.
